RE: CP-Carrillo Fastener Assembly lubrication

Dear Customer,

We are proud to introduce *CP-Carrillo fastener assembly lube*. As the industry leader CP-Carrillo constantly looks for ways to improve our products and the results of this continued effort is a new, improved lubrication for the fasteners.

The fastener system of a high performance connecting rod is most likely the most critical unit of the assembly. As a result it is important that the fastener is installed per instructions and with the recommended lube. CP-Carrillo's fastener assembly lube is still molybdenum based lubrication grease, but with enhanced properties. This product offers an improved clamp load repeatability, greater resistance to high pressure and temperature (range -22F to 1200F), and no oil contamination. The coefficient of friction stays unchanged, even after several bolt re-tightening and loosening processes.

CP-Carrillo has close to fifty years of experience of working with what have become the most recognized fasteners in the connecting rod industry. This experience has created one of the most impressive success records of any automotive aftermarket parts supplier. Carrillo has supplied components to the winners of virtually all venues of Motorsports throughout the world. The list includes Formula 1, 2, and 3, NASCAR, NHRA, IRL, World Rally, AMA, Superbike, Trans AM, CanAM, GTP, SCCA, Sprint Cars, Modified, Land Speed, the list is practically endless.

The lube is available in .34 oz tube and 36oz jars.

If you have any questions regarding the lube or properties of the lube please call our office, visit our website or scan code.

Kind Regards,

Barry Calvert
President
CP-Carrillo
